

Socket Testers

LOOPCHECK 107

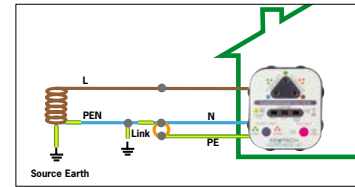

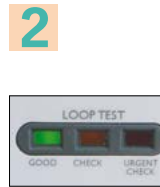

Full socket tester, loop check, RCD and mains polarity. Makes a great partner for PAT testers.

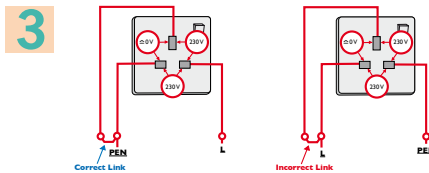

The electrical safety council recommend the use of advanced socket testers, the LOOPCHECK107 goes one step further, here is what it can do:

1 Standard Socket Test – looks at the voltage difference between pins (cannot tell if there is a neutral / earth swap).

2 A standard socket tester indicates whether the socket connections are correctly positioned, it cannot tell you if your earth connections are safe. The Loopcheck 107 conducts an earth loop test to indicate the quality of the loop.

3 If your mains polarity has been switched at the incomer, your standard socket test cannot indicate this. By touching the test pad the Loopcheck 107 can indicate this very dangerous situation.

4 30mA RCD test

KEWCHECK 103

High definition LEDs with clear audible tone. Indicates 14 wiring conditions.

	103	107
Correct polarity at the socket Are there any wrong or miss connections?	✓	✓
Quality of the earth loop Are all connections and the condition of the earth return path safe?		✓
Checks Mains Polarity Polarity can also be incorrect at the incoming mains, this is very hazardous		✓
RCD Check Tests for 30mA x 1 functionality		✓
