

The KEWSTICK DUO - Unique Dual Sensitivity Voltage Detector*

For reduced sensitivity simply press and hold attenuation button. It features two colour LED feedback a heartbeat (green) and voltage detection is indicated by a red LED and buzzer.

- Clearly detects 90 – 600 V AC without metal contact
- Bi-colour LED indication of correct operation (green) and volts present (red)
- Audible indication of correct operation and warning of volts present

Tip **glows red** when voltage is detected

To distinguish between two cables close to each other press and hold down the attenuation switch, the Kewstick will be desensitised and has to be held closer to the cable to respond to the electrical field. This way you can differentiate between line and neutral or dead cables when they are close to each other.

Tip **pulses green** to indicate correct operation
